When the battery is in use and device is discharging

Blinking Red: Low Battery  
Blinking Orange: Discharging  
Blinking Green: Fully Charged

\*The LED (Light Emitting Diode) blinks when the battery is being used .

## 6,000mAh Lithium-ion Battery Installation

1. Turn the battery door knob counterclockwise and open the battery door as shown below. (H)

2. Insert the battery to the KDCSLED-UHF1.0W inner guide groove. (I)

3. Close the battery door. And turn the battery door knob clockwise to lock. (J)

## Changing Tag Read Mode

The tag read mode is changed by scanning one of the following barcode or by pressing the Down key of SmartSled for 3 seconds in RFID mode.

The order is changed to in the following order:  
Active (default) read -> Single read -> Multiple read

### Active Read Mode

Basic operation status. Simultaneous reading of multiple tags while pressing the scan button (max. 10 minutes).

\* 3 short beeps will occur when changing mode with Down key.

Active Read Mode

### Single Read Mode

Only one tag is read every time the scan button is pressed.

\* 1 short beep will occur when changing mode with Down key.

Single Read Mode

### Multiple Read Mode

When the Scan button is pressed, multiple tags are read simultaneously for the set time (default 10 seconds).

\* Time setting can be changed in Settings -> Reading Timeout.

\* 2 short beeps will occur when changing mode with Down key.

Multiple Read Mode

## Toggling Read Modes

There are two read modes in which the SCAN or Trigger button works and they are toggled by pressing UP button for 3 seconds.

- Barcode Mode: When entered into this mode, 1 long and 1 short beep will be heard. Barcodes can be read with SCAN or Trigger button.
- Tag Reading Mode: When entered into this mode, 1 long and 2 short beeps will be heard. UHF tags can be read with SCAN or Trigger button.
